

Data Science Notes

Barclays Research's Data & Investment Sciences blog, where we dive into some of the frequently asked questions about data science and how it is reshaping investing.

29 June 2020

How to hire 'investment scientists', applied users of data science

If you want to use data science (DS) for investing, people who can bridge the gap between pure data science and traditional investing will multiply your impact. In this blog, we examine the role of the 'Investment Scientist', who provides a bridge between DS and traditional investing roles.

Investment Sciences

What is an 'investment scientist'?

- **A bridge between two domains.** If Data Scientists are the technical leads, the Investment Scientist role is the business or product lead. They facilitate making the most complimentary combination of both investment research insights and data science techniques by operating across both domains.
- **They work best if they are also analysts in their own right.** One important role is acting as translators between data science and fundamental investment. But that works best when they are able to take ownership and generate their own investment ideas, too. That makes creativity with research ideas, comfort with data science techniques, and agility in assessing potential research projects the key skills for Investment Scientists.

What experience or skills to look for?

The foundations tend to be similar to those of data scientists

Investment Scientists tend to have the same background and training as Data Scientists: degrees in quantitative disciplines such as physics, economics, engineering or the like. On our team, most members have advanced degrees in these fields.

Experience in building investment theses

Leveraging data science and alternative data does not change the core aim of investment research: building robust investment theses. The best investment scientists have their own views about how to structure an investment idea and what empirical evidence is most compelling in supporting (or invalidating) the thesis. They also need to be able to collaborate with domain experts and bring valuable intuition on the relative merits of datasets and projects. In practice, most of our Investment Sciences team has worked in a traditional investment research role, though there is a mix of those who have come from fundamental, strategy, and quant approaches.

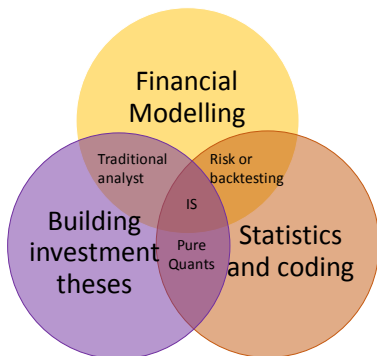

Communication, communication, communication

For novel and advanced methods to become embedded in existing investment research practices, it is necessary to communicate their benefits to audiences of varying technical backgrounds. In practice, our Investment Scientists spend a lot of time helping data scientists understand the intuition behind investment questions: why we care how many people are visiting casinos or getting elective surgery or posting particular jobs. On the other side, they also help fundamental researchers understand the strengths and limitations of data science: for example, when geolocation data gives a useful insight even after considering its inherent uncertainty, or why correlation is not the same as causation. The investment scientists also help frame our work directly to clients across the spectrum, from those making discretionary decisions based on fundamentals, to others who are interested in integrating new data into systematic processes.

Not all data roles are equal

Many roles within the investment community incorporate heavy use of data, but are those people well suited to Investment Scientist roles? There are no hard and fast rules, so candidates from a range of backgrounds could be suitable. In Figure 1 we show some of the skillsets within different data-led investing roles. We contrast with Figure 2 the traditional skillsets of a Data Scientist, with the difference not just being in financial modelling but also in their approach to building an investment thesis.

Data scientists and investment scientists on our teams both speak the language of math and computer science, and both share a common goal: to produce impact by developing our understanding of the world. They tend to differ in their approaches to doing that. While data scientists often approach the problem by applying the tools and methods of data science to answer otherwise unanswerable questions, the thinking process of investment scientists is rooted more from their rich domain knowledge. When the two collaborate, we end up with the best of both worlds.

Disclaimer:**BARCLAYS**

This communication has been prepared by Barclays.

"Barclays" means any entity within the Barclays Group of companies, where "Barclays Group" means Barclays Bank PLC, Barclays PLC and any of their subsidiaries, affiliates, ultimate holding company and any subsidiaries or affiliates of such holding company.

CONFLICTS OF INTEREST

BARCLAYS IS A FULL SERVICE INVESTMENT BANK. In the normal course of offering investment banking products and services to clients, Barclays may act in several capacities (including issuer, market maker and/or liquidity provider, underwriter, distributor, index sponsor, swap counterparty and calculation agent) simultaneously with respect to a product, giving rise to potential conflicts of interest which may impact the performance of a product.

NOT RESEARCH

The information provided does not constitute 'investment research' or a 'research report' and should not be relied on as such, although it may contain references to views or information published by the Barclays Research department. Investment decisions should not be based upon the information provided.

BARCLAYS POSITIONS

Barclays may at any time acquire, hold or dispose of long or short positions (including hedging and trading positions) and trade or otherwise effect transactions for their own account or the account of their customers in the products referred to herein which may impact the performance of a product.

FOR INFORMATION ONLY

This information has been prepared by the Research Department within the Investment Bank of Barclays. The information, analytic tools, and/or models referenced herein (and any reports or results derived from their use) are intended for informational purposes only. Barclays has no obligation to update this information and may cease provision of this information at any time and without notice.

NO OFFER

Barclays is not offering to sell or seeking offers to buy any product or enter into any transaction. Any offer or entry into any transaction requires Barclays' subsequent formal agreement which will be subject to internal approvals and execution of binding transaction documents. The products mentioned may not be eligible for sale in some states or countries, nor suitable for all types of investors.

NO LIABILITY

Neither Barclays nor any of its directors, officers, employees, representatives or agents, accepts any liability whatsoever for any direct, indirect or consequential losses (in contract, tort or otherwise) arising from the use of this communication or its contents or reliance on the information contained herein, except to the extent this would be prohibited by law or regulation.

NO ADVICE

Barclays is not acting as a fiduciary. Barclays does not provide, and has not provided, any investment advice or personal recommendation to you in relation to any transaction and/or any related securities described herein and is not responsible for providing or arranging for the provision of any general financial, strategic or specialist advice, including legal, regulatory, accounting, model auditing or taxation advice or services or any other services in relation to the transaction and/or any related securities described herein. Accordingly Barclays is under no obligation to, and shall not, determine the suitability for you of the transaction described herein. You must determine, on your own behalf or through independent professional advice, the merits, terms, conditions and risks of any transaction described herein.

NOT A BENCHMARK

The information provided does not constitute a financial benchmark and should not be used as a submission or contribution of input data for the purposes of determining a financial benchmark.

INFORMATION PROVIDED MAY NOT BE ACCURATE OR COMPLETE AND MAY BE SOURCED FROM THIRD PARTIES

All information is provided "as is" without warranty of any kind. Because of the possibility of human and mechanical errors as well as other factors, Barclays is not responsible for any errors or omissions in the information contained herein. Barclays is not responsible for information stated to be obtained or derived from third party sources or statistical services. Barclays makes no representation and disclaims all express, implied, and statutory warranties including warranties of accuracy, completeness, reliability, fitness for a particular purpose or merchantability of the information contained herein.

PAST & SIMULATED PAST PERFORMANCE

Any past or simulated past performance including back-testing, modelling or scenario analysis contained herein is no indication as to future performance. Past performance is not necessarily indicative of future results. No representation is made as to the accuracy of the assumptions made within, or completeness of, any modelling, scenario analysis or back-testing and no representation is made that any returns will be achieved.

OPINIONS SUBJECT TO CHANGE

All opinions and estimates are given as of the date hereof and are subject to change. The value of any investment may also fluctuate as a result of market changes. Barclays is not obliged to inform the recipients of this communication of any change to such opinions or estimates.

NOT FOR RETAIL

This document is being directed at persons who are professional investors and is not intended for retail customer use.
Not For Further Distribution or Distribution To Retail Investors.
For Discussion Purposes Only.

IMPORTANT DISCLOSURES

For important regional disclosures you must read, visit the link relevant to your region. Please contact your Barclays representative if you are unable to access.
